Melanie,

Attached is a selection of the more technical comments that I have received during the public comment period for the Back Forty project. The TMEYERS hydrology report is a detailed analysis of the MODFLOW model. The CSP2 report covers both the F&P Alternatives Analysis and details hydrology and indirect impacts.

Colman Engineering was retained by Lake Township for a technical assessment of the application and the attached comments were made on their behalf.

Anthony Allard is the neighbor directly to the south of the proposed project area, and wetland 2b crosses the project boundary onto his property where is channelizes and drains south to the Shakey Lakes area.
